ADAM CREED

STAFF ENGINEER | AWS PLATFORM, BACKEND SYSTEMS & APPLIED AI

Melbourne, VIC | amcreed99@gmail.com | linkedin.com/in/adam-creed | github.com/amcreed1999

PROFILE

Hands-on engineering leader building and operating production cloud-native services and AI-enabled workflows. Lead a 13-person engineering team at FreightCyber while remaining active in AWS architecture, Python/TypeScript backend development, reliability, security and technical delivery. Experienced turning ambiguous operational needs into maintainable systems, with practical Amazon Bedrock integrations and a bias toward deterministic workflows, observable services and safe failure handling.

TECHNICAL STRENGTHS

Python, TypeScript/JavaScript, REST APIs, PostgreSQL, React/Next.js | AWS: ECS/Fargate, Lambda, API Gateway, SQS, Aurora/RDS, DynamoDB, IAM, S3 | Terraform, CI/CD, GitHub Actions, automated testing | Distributed systems, asynchronous workflows, observability (OpenTelemetry, Grafana, Prometheus, CloudWatch), Amazon Bedrock

PROFESSIONAL EXPERIENCE

FreightCyber | Melbourne, Australia

Engineering Team Lead | Jan 2026 – Present

- Lead a 13-person engineering team while remaining hands-on in backend architecture, AWS platform decisions, code review, incident response and mentoring; translate loosely defined business requirements into shipped systems.
- Reduced engineering time spent on bugs from 52% to 12% within six months by strengthening testing, observability, review practices and root-cause analysis.
- Led brownfield migration of AWS infrastructure to Terraform and evolution of production workloads from predominantly Lambda toward ECS/Fargate; focus on secure, repeatable operations.
- Introduced Grafana, Prometheus, OpenTelemetry and CloudWatch to improve diagnosis and visibility across distributed services and integrations.

Full Stack Engineer | Apr 2025 – Jan 2026

- Redesigned synchronous invoicing into an asynchronous outbox workflow capable of initiating 1,000+ jobs in under six seconds, with retries, failure isolation and reconciliation.
- Built failure-tolerant MYOB integration processing approximately A$500k/month in customer invoices, accounting for API limits, concurrency and third-party failures.
- Reworked real-time vehicle tracking for roughly 100 concurrently active vehicles, reducing WebSocket update latency from 30 seconds to under one second.

SELECTED AI ENGINEERING

- Built production driver auto-assignment using deterministic scoring and automated tests, with Amazon Bedrock generating human-readable explanations of recommendations.
- Independently designed and shipped ToothNotes, an AI-assisted dental clinical documentation application using AWS and Amazon Bedrock, informed by real clinician feedback.

EARLIER EXPERIENCE & EDUCATION

Postgraduate Researcher, University College Cork | Jul 2023 – Oct 2024 — Built clinician-focused 3D EEG visualisation using Unity, C#, Python and OpenXR.

R&D Engineering Intern, Liebherr Ireland | Summer 2023 — Engineering R&D across software and electronics.

MEngSc, University College Cork (2024) | BEng Electrical & Electronic Engineering, University College Cork (2024)
