ADAM CREED

ENGINEERING TEAM LEAD · AWS PLATFORM, BACKEND SYSTEMS & APPLIED AI

Melbourne, VIC · amcreed99@gmail.com · linkedin.com/in/adam-creed · github.com/amcreed1999 · amcreed1999.github.io

PROFILE

Hands-on engineering leader building and operating production cloud-native services and AI-enabled workflows. Lead a 13-person engineering team at FreightCyber — an Australian transport & logistics technology company building the FCX enterprise operating system — while remaining active in AWS architecture, Python/TypeScript backends, reliability, security and delivery. Bias toward deterministic workflows, observable services and safe failure handling, including production Amazon Bedrock integrations and systems operated under ISO 27001.

TECHNICAL STRENGTHS

Python, TypeScript/JavaScript, REST APIs, PostgreSQL, React/Next.js | AWS: ECS/Fargate, Lambda, API Gateway, SQS, Aurora/RDS, DynamoDB, IAM, S3 | Terraform, CI/CD, GitHub Actions, automated testing | Distributed systems, asynchronous workflows, observability (OpenTelemetry, Grafana, Prometheus, CloudWatch), Amazon Bedrock, ISO 27001 information security

PROFESSIONAL EXPERIENCE

FreightCyber · Melbourne, Australia

Australian-owned transport & logistics technology company. Product: FCX — integrated enterprise OS for fleet, dispatch, drivers, compliance, warehousing and financial operations (web, mobile, AWS backend).

Engineering Team Lead | Jan 2026 – Present

- Lead a 13-person engineering team (web, mobile and backend) while remaining hands-on in architecture, AWS platform decisions, code review, incident response and delivery; translate ambiguous business needs into shipped systems.
- Own hiring and onboarding for engineering roles; run mentoring, performance feedback and technical standards so quality scales beyond individual contributors.
- Set technical direction and roadmap priorities with product and stakeholders; keep architecture, reliability and release discipline aligned across the team.
- Reduced engineering time spent on bugs from 52% to 12% within six months by strengthening testing, observability, review practices and root-cause analysis.
- Led brownfield migration of AWS infrastructure to Terraform and evolution of production workloads from predominantly Lambda toward ECS/Fargate; secure, repeatable operations under ISO 27001.
- Introduced Grafana, Prometheus, OpenTelemetry and CloudWatch to improve diagnosis across distributed services and integrations.

Full Stack Engineer | Apr 2025 – Jan 2026

- Redesigned synchronous invoicing into an asynchronous outbox workflow capable of initiating 1,000+ jobs in under six seconds, with retries, failure isolation and reconciliation.
- Built failure-tolerant MYOB integration processing approximately A$500k/month in customer invoices, accounting for API limits, concurrency and third-party failures.
- Reworked real-time vehicle tracking for roughly 1,000 concurrently active trucks, reducing WebSocket update latency from 30 seconds to under one second.

SELECTED AI ENGINEERING

- **FreightCyber:** Built production driver auto-assignment using deterministic scoring and automated tests, with Amazon Bedrock generating human-readable explanations of recommendations.
- **ToothNotes (independent):** Designed and shipped an AI-assisted dental clinical documentation application on AWS and Amazon Bedrock, informed by clinician feedback (~4 hours saved weekly for primary user).

INDEPENDENT PRODUCT

- **Club Fundraiser:** Built and operated a configurable fundraising platform (Next.js, Stripe, Firebase) that processed €100k+ in payments for community clubs — campaigns, payments, email and administration. club-fundraiser.com

EARLIER EXPERIENCE & EDUCATION

Career break / travel | Oct 2024 – Mar 2025 — Travelled while relocating from Ireland to Melbourne.

Postgraduate Researcher, University College Cork | Jul 2023 – Oct 2024 — Clinician-focused 3D EEG visualisation in Unity, C#, Python and OpenXR; first-author paper in *Sensors* (M2EEG-VR, DOI: 10.3390/s26134167).

R&D Engineering Intern, Liebherr Ireland | Summer 2023 — Engineering R&D across software and electronics.

MEngSc, University College Cork (2024) | **BEng** Electrical & Electronic Engineering, University College Cork (2024)
